

ANSMANN Press Release

ALCT 24-2

"24 V lead acid charger with 2A charging current and for worldwide use"

Lead acid batteries are not antiquated cells – far from it! These maintenance free, long living and economic energy sources are used in many applications. In emergency lights and for UPS (uninterruptible power supply), in cars and golf caddies, you will find lead acid batteries used. ANSMANN is offering the perfect lead-acid charger for most applications – the ALCT 24-2. Designed for maintenance free lead acid batteries with 24V, the high charging current of 2A and the intelligent charging technology (IVoV control) will provide very short charging times. The charger can be used worldwide (100-240 V) and stand-by operation or parallel operation is possible. The trickle charging mode assures always "fresh" batteries. For safe operation the charger is equipped with a reverse-connect and short-circuit protection as well as an overcharging protection. ANSMANN gives a warranty of 3 years.
